## About

An experienced and accomplished Systems Administrator, with a background in software development, that has demonstrated a strong passion for automation and innovation of all facets related to the software development life-cycle and all underlying infrastructure required. Looking for a position that would leverage principles from software development, traditional systems administration, and other principles under the DevOps umbrella, in order to contribute to, and improve, an overall customer value chain of an organization that shares some of the same passion.

## Work

### Hachette Book Group

2010-12-01 —

<http://www.hachettebookgroup.com> (<http://www.hachettebookgroup.com>)

### Principal Systems Administrator

Provided infrastructure and application support for a book publishing company.

## Highlights

- Architected and implemented a complete private cloud infrastructure utilizing HP Servers, NetApp Storage, and VMware
- Migrated all legacy applications and physical servers to private cloud infrastructure
- Provided lead infrastructure support in effort involving transitioning off of mainframe-based application to more modern application framework hosted in private cloud infrastructure
- Developed enterprise-level job scheduler responsible for stuff
- Developed infrastructure dashboards for executives providing real time stats and uptime
- Developed automated workflow for release of new builds to dev/test/stage/prod
- Implemented configuration management throughout the environment using Puppet
- Implemented a custom Puppet ENC that defined all nodes and what was to be installed on each node
- Developed a custom application that served as global repository of aggregated information about all infrastructure elements (servers, virtual machines, storage, databases, networks, etc.), dynamically populated by what is actually in the environment
- Implemented Kanban style workflow for Infrastructure Team which include specific checkpoints for elaboration and documentation
- Developed repeatable pattern for automation of all internally developed applications

## Digi-Net Technologies, Inc.
